

THERMiVa®

Rediscover your younger self

Do you suffer from any of the following post childbirth symptoms?

- Mild to moderate incontinence
- Urinary urgency
- Vaginal laxity
- Pelvic prolapse
- Dryness
- Sexual dysfunction

What is THERMiVa*?

THERMiVa® is a new non-invasive treatment which offers a solution to many of the gynaecology problems associated with childbirth.

Treatment is fast, painless and involves minimal downtime – all of which means you can expect great results without having to resort to more invasive measures, like surgery.

No anaesthesia is required and the procedure simply involves the use of a small heated wand which is inserted and moved gradually over the specific tissues.

Treatment Plan

An initial consultation* is required and treatment starts from £795 per session (discounted course of 3 treatments is £2,250).

A typical treatment will last around half an hour. Three treatments are recommended however many patients will experience a notable difference after one session.

What our patients have to say....

"The most obvious improvement after my first treatment was that for the first time in decades I have been able to sleep through the night without getting up to use the bathroom at 3am or 4am"

"After having my second baby last year, my pelvic floor muscles were just not the same as they were. I was really nervous about going to the gym. Even a short run was something I had to 'come prepared for'. But since I've had my TherMiVA treatments I can do my circuit training and squats again, without any worries, or surgery."

THERMiVa® is now available at
